It seems this can be implemented tomorrow. Just use Idea Place?

I do not understand how this is different from IIR?

An Idea Place community specific to this group would seem to meet their needs- I do not see a difference between One Bridge and Idea Place

N/A

language and positioning are too general, not clear what types of ideas/problems are covered, who will moderate, how you'll generate engagement

N/A

Your problem statement seems quite broad. I would like to see some specific examples of the types of problems your solution would solve. I can also imagine that different functional groups within the company have unique problems, which makes a repository of all problems seem unnecessary.
